

ReMarco ble Capability

“The Marco **idoc** provides immediate medical-legal EMR documentation of ocular conditions. In cases where patients are experiencing decreased acuities, anterior segment photography allows you to establish vision loss due to media opacities. For my patients I can finally demonstrate cataracts, corneal ulcers, incomplete blinks, pterygium, pinqueculae, and other developments. The system easily connected to our slit lamp—small, clean, and well integrated: the SW was equally simple to download, and intuitive to use. The idoc fits perfectly into our increasingly high-tech practice.”
